

Cancer in

Louisa County

Mary Charlton, PhD & Audrey Gronemeyer, MPH

November 10, 2025

Who we are

Mary Charlton, PhD

- Professor, University of Iowa College of Public Health
- Director, Iowa Cancer Registry
- President, Iowa Cancer Consortium
- Co-Leader of the Cancer Epidemiology & Population Science Program, Holden Comprehensive Cancer Center
- Research: Rural/ Urban differences in cancer prevention, screening, & quality of care

Audrey Gronemeyer, MPH

- Research Specialist, lowa Cancer Registry
- Assists the Registry with project management
- Coordinator for the 99
 Counties Project

These slides will be posted

These slides will be posted to the Iowa Cancer Registry website:

www.iowacancerregistry.org/99

If you have questions after, please email us at ICR-99countiesproject@uiowa.edu

Media

If you are a representative of the media and would like more information on this presentation or to speak with someone from the Iowa Cancer Registry, contact ICR-Media@uiowa.edu.

Survey

We would appreciate your feedback on this presentation.

We will send & post a link to a brief survey after this presentation.

99 Counties Project Team

Holden Comprehensive Cancer Center

"Statistics are people with the tears wiped away"

Dr. Irving Selikoff

lowa has the #2 highest rate of new cancers in the U.S.

Iowa's rate is

14% higher than
the U.S. rate

Rate of New Cancers

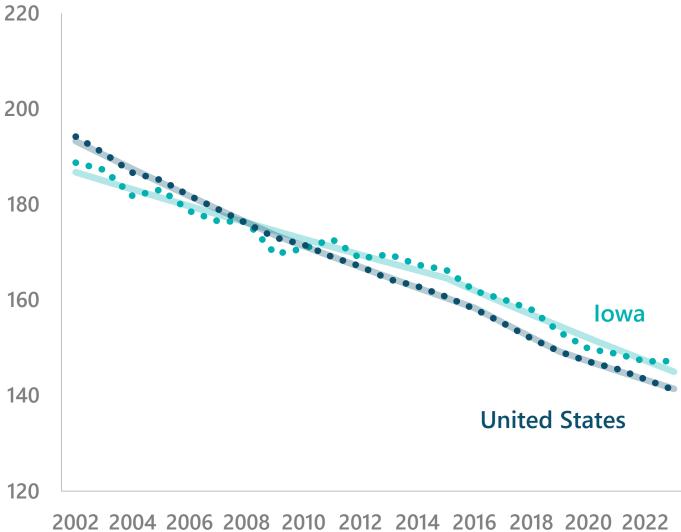

Rate of Cancer Deaths

Iowa has the #23 highest rate of cancer deaths in the U.S.

lowa's rate is 3% higher than the U.S. rate

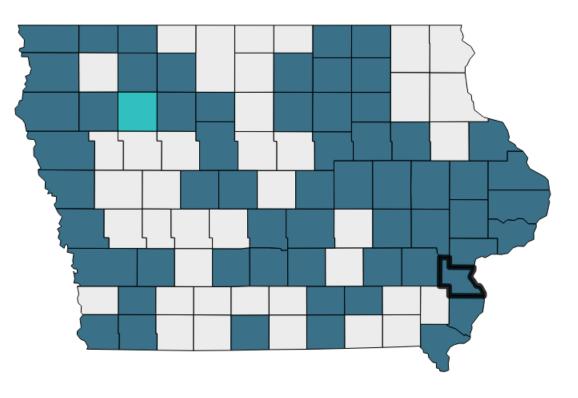

Over half of Iowa's counties have a higher incidence rate than the U.S.

59 Counties with rate **OVER** the national average

1 County with rate
BELOW the national average

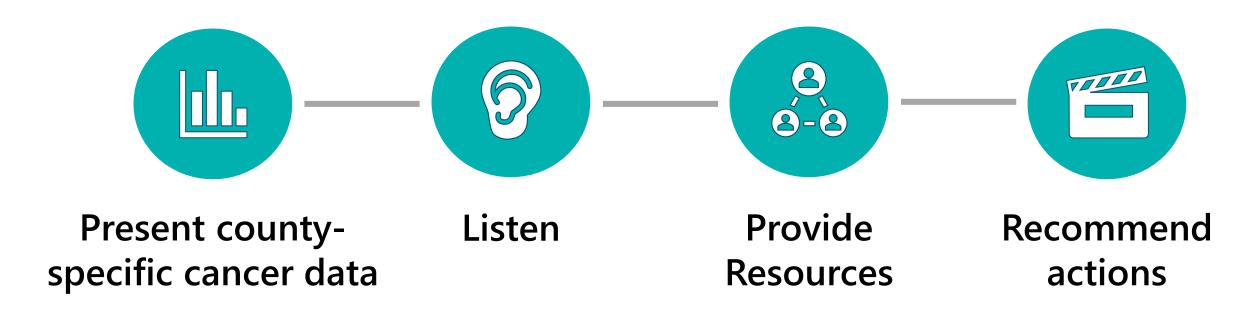

- Above National Average
- **■** Below National Average
- Similar to National Average

2018-2022 Incidence

About the Project

Goal: to enhance community engagement & education around cancer prevention and control across all of lowa's 99 counties.

There are Many Cancer Control Partners in Iowa

State Government

Governor

- Implement state laws
- Advance and pursue policies and programs

lowa Legislature

- Propose and vote on legislation
- Appropriate money to state agencies and programs
- Create and modify lowa laws

Health and Human Services

Bureau of Chronic, Congenital and Inherited Conditions

Comprehensive Cancer Control Program

Cancer prevention, screening, survivorship

Care for Yourself (Breast & Cervical Cancer Program)

Colorectal Cancer Screening Program

Bureau of Environmental Health Services

- · Track environmental health-related diseases
- Assist local boards of health

Local (County) Public Health Services/Boards of Health

- · Address health priorities and health disparities
- Promote healthy living
- Protect against environmental hazards
- Assure access to health services

Unity Point, MercyOne, Great River, Avera, Mayo, Methodist, Gundersen, Sanford and numerous independent health systems, hospitals and clinics across lowa

Provide cancer prevention, screening, treatment, and survivorship services

Iowa Cancer Consortium

Advocate, collaborate, plan

Holden Comprehensive Cancer Center

Iowa's only NCI Designated
Cancer Center

Health Care, research, education

Data, support research & education

American Cancer Society

Iowa Cancer Action Network

Advocate for better policies

ACS Iowa

Help with cancer treatment and recovery

UI Research Centers

Center for Health Effects of Environmental Contamination

Iowa Cancer Registry Goals

Assemble & report data on new cancers, cancer deaths, & survival

Respond to **data requests** from organizations & individuals

Support studies for cancer prevention, research & education

Federal Funding for Cancer Control in Iowa

- The <u>Iowa Cancer Registry</u> is funded in part with Federal funds from the <u>National Cancer</u> <u>Institute (National Institutes of Health)</u>, Department of Health and Human Services, under Contract No. HHSN261201800012I
- The <u>Cancer in Iowa: 99 Counties Project</u> is specifically funded by Federal funds from the
 National Cancer Institute
 through grant award: 5R01CA254628-04S2, and through National
 Cancer Institute funds provided to the University of Iowa Holden Comprehensive Cancer Center
 (P30CA086862)
- The <u>lowa Cancer Consortium</u> acknowledges the **Centers for Disease Control and Prevention** (CDC) for its funding support under cooperative agreement NU58DP007103 awarded to the lowa Department of Health and Human Services (lowa HHS).

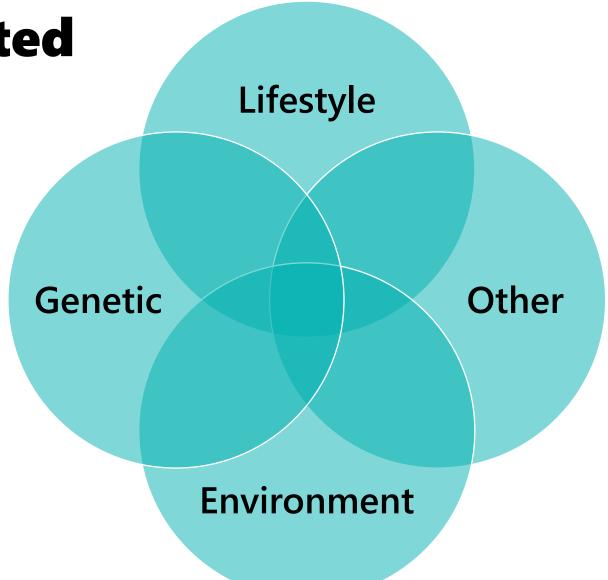

The contents of this presentation are solely the responsibility of the authors and do not necessarily represent the official views of CDC or the National Institutes of Health/National Cancer Institute.

Background on Cancer

Cancer is Complicated

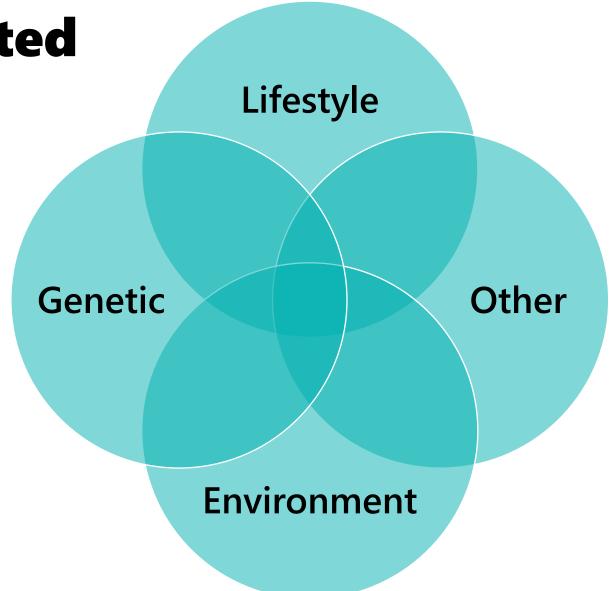

There is no one cause of cancer; it is a combination of different genetic, lifestyle, and environmental risk factors that change the function of cells

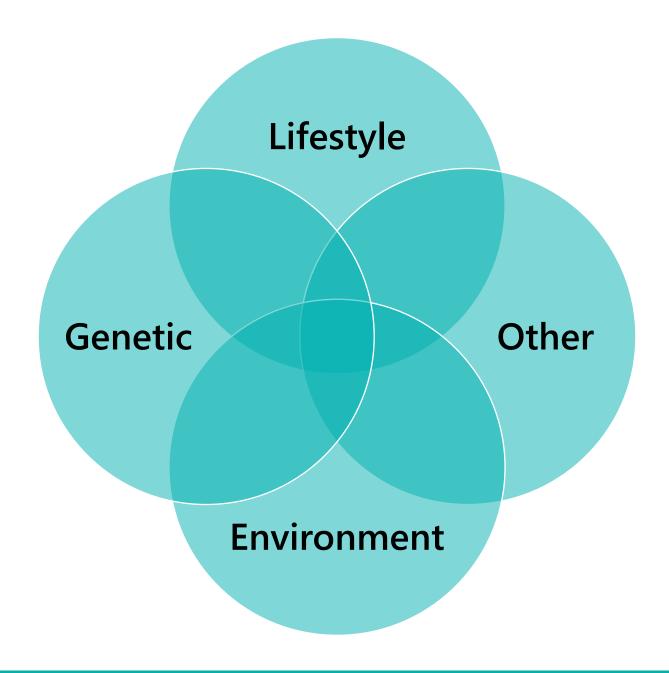

Cancer is Complicated

Risk factors are things that increase your chances of getting cancer

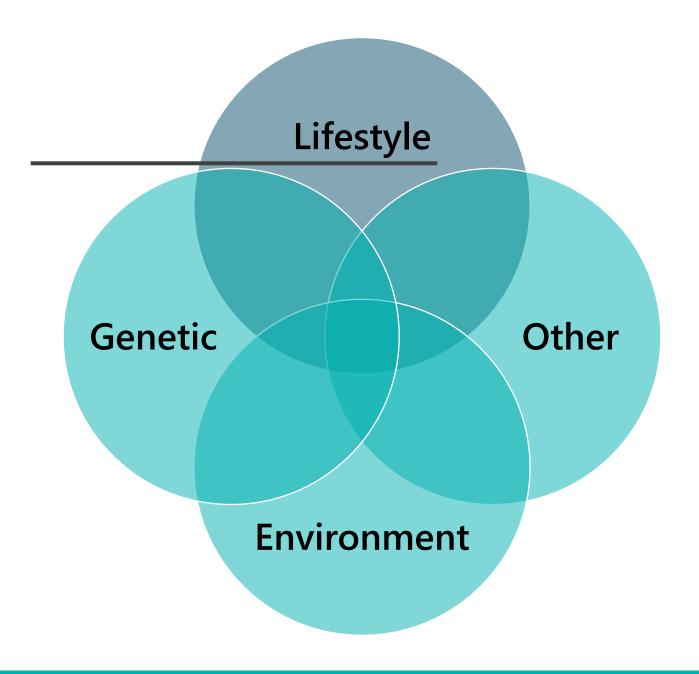

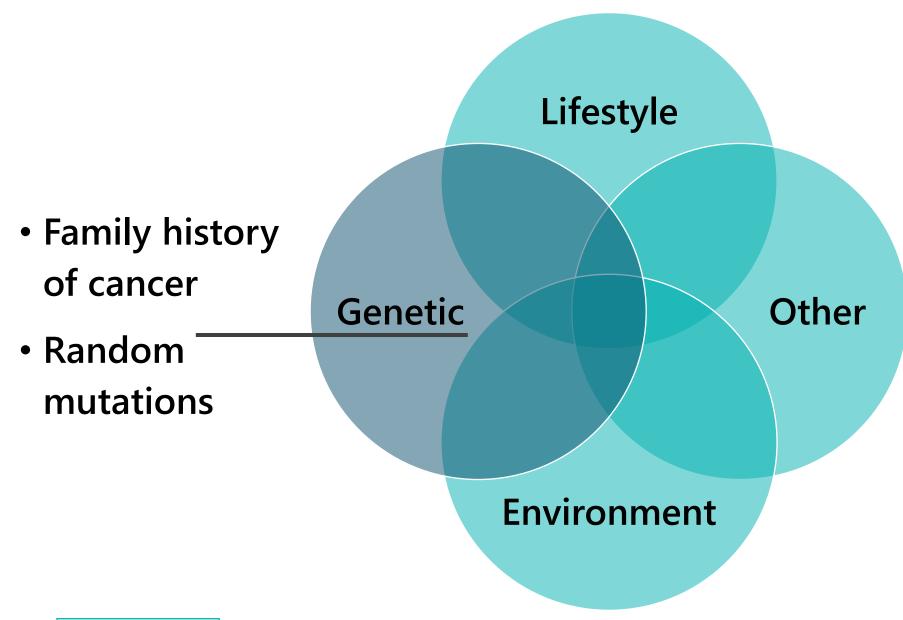

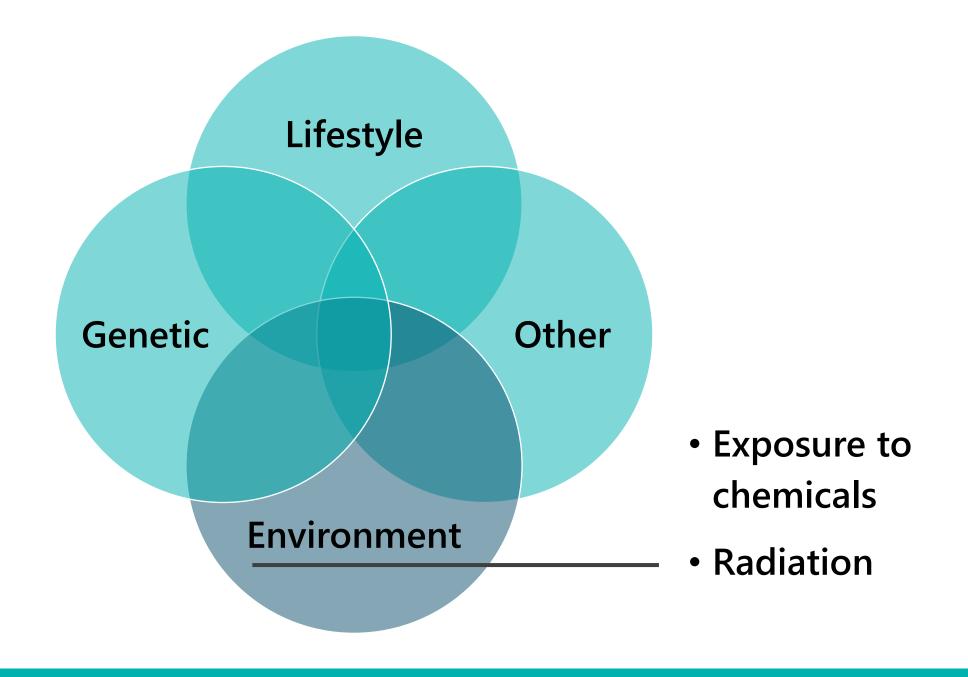

- Tobacco
- Alcohol
- Unhealthy diet
- Not being physically active
- Sunburns

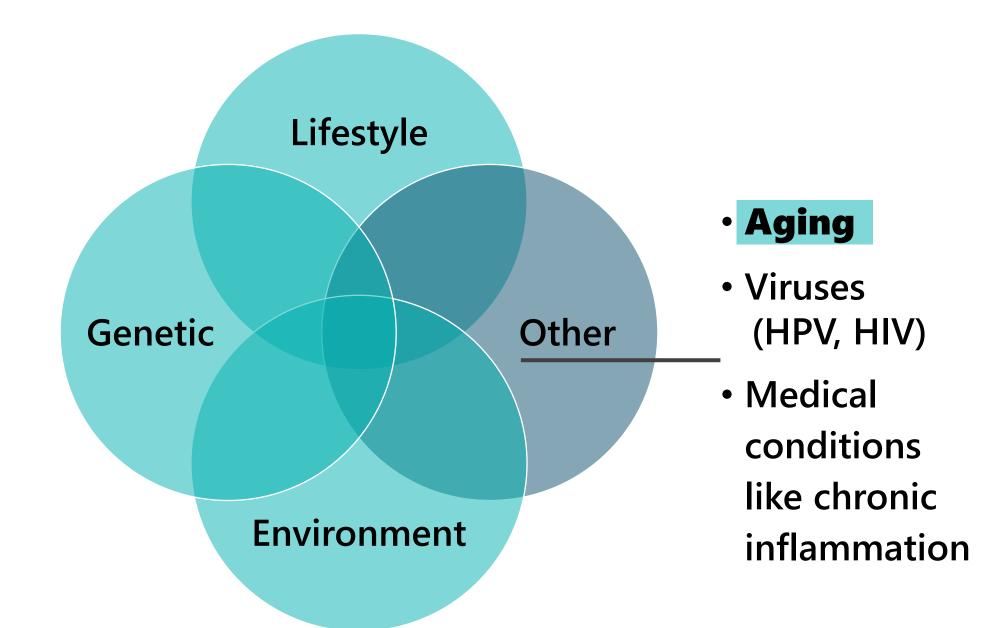

Cancer & the Environment

- Many lowans understandably have questions about potential links between environmental exposures and cancer
- This is an important area of continued research, and lowans are right to ask questions and be cautious
- ICR, along with other population-based cancer registries, do not collect data on environmental risk factors, but we do share our data with researchers to support studies of cancer & environmental risk factors

Risk Factors

- There can be many years between exposure to risk factors & cancer development, which makes it difficult to prove connections.
 - For example, lung cancer may not occur until 30 years after a person starts smoking
- Today we will focus on things you can do to reduce your cancer risk. These things can be addressed at the state, community, and individual levels.

Key Terms

Incidence & Mortality

- Incidence
 - Number of new cases of cancer occurring during a specified time period in a population
- Mortality
 - Number of deaths from cancer that occur during a specified time period in a population

Rates & Counts

- Counts
 - -The number of new cases diagnosed or deaths from cancer
- Age-Adjusted Rates
 - -Addresses the question: *If the size and age of the populations were the same, would there be a difference in outcomes?*
 - -Adjusts the counts to give a # per 100,000 people

Stage definition used today

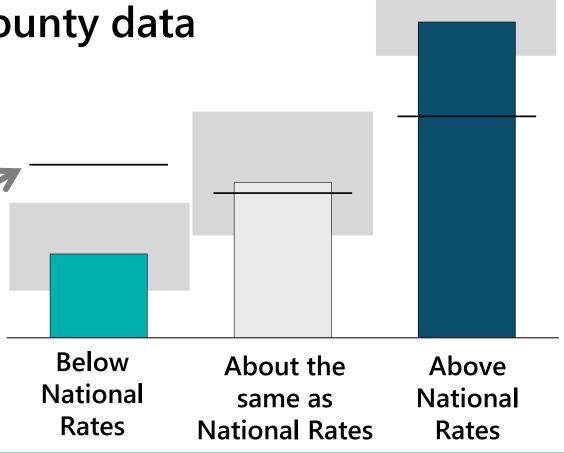

- Early Stage includes
 - Localized: cancer is limited to the place where it started, with no sign that it has spread
- Late Stage includes
 - Regional: cancer has spread to nearby lymph nodes, tissues, or organs
 - Distant: cancer has spread to distant parts of the body

How to read the graphs

Unless otherwise stated, bars are your county data

Black lines on bar graphs are United States data

Grey boxes on bar graphs are 95% Confidence Intervals.

These are used to determine if rates are statistically different from each other

Cancer in Louisa County

New Cancers in Louisa County

All cancer types, average counts and rates, 2018-2022

Each year, there are about

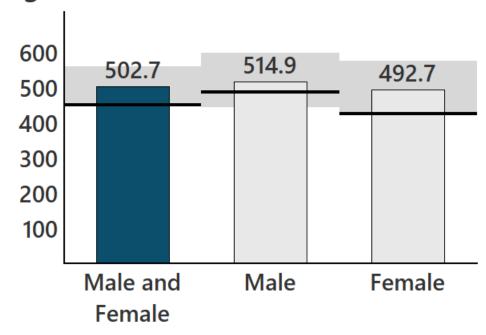

77

new cancers diagnosed in Louisa County

Cancer incidence rates in Louisa County are higher than the U.S. average

Ranks #49 of 99 counties

Cancer incidence rates are typically higher in men than women

Cancer deaths in Louisa County

All cancer types, average counts and rates, 2019-2023

Each year, there are about

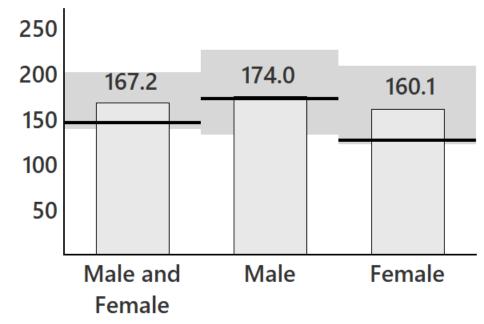

25

cancer deaths in Louisa County

Cancer mortality rates in Louisa County are **Similar to National Average**

Ranks #21 of 99 counties

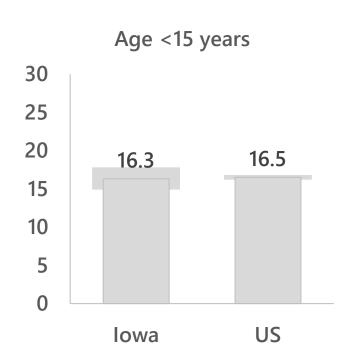

Cancer mortality rates are typically higher in men than women

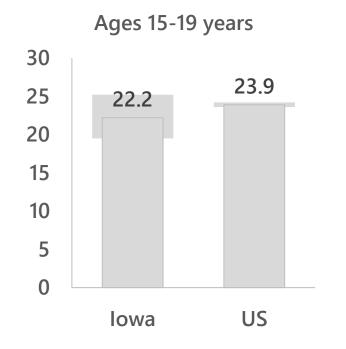

Pediatric, Adolescent, and Young Adult New Cancers in Iowa

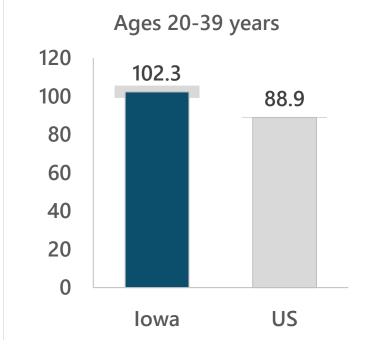

Pediatric cancer incidence rates in Iowa are not different than the U.S. rate

Adolescent cancer incidence rates in Iowa are not different than the U.S. rate

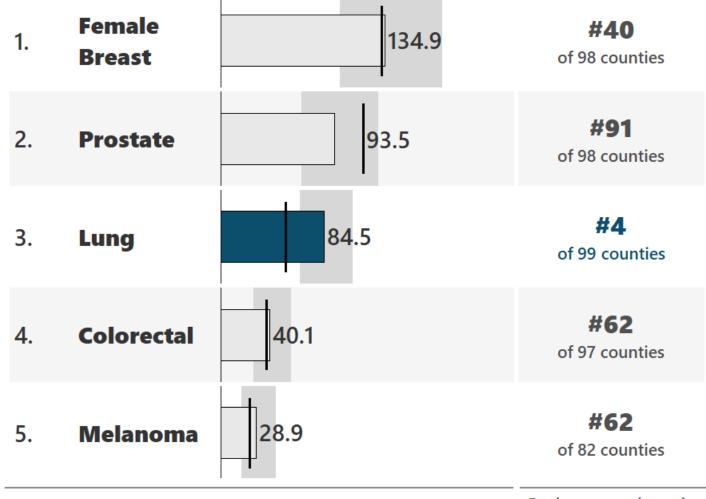

Young Adult cancer incidence rates in Iowa are higher than the U.S. rate

Top cancers in Louisa County

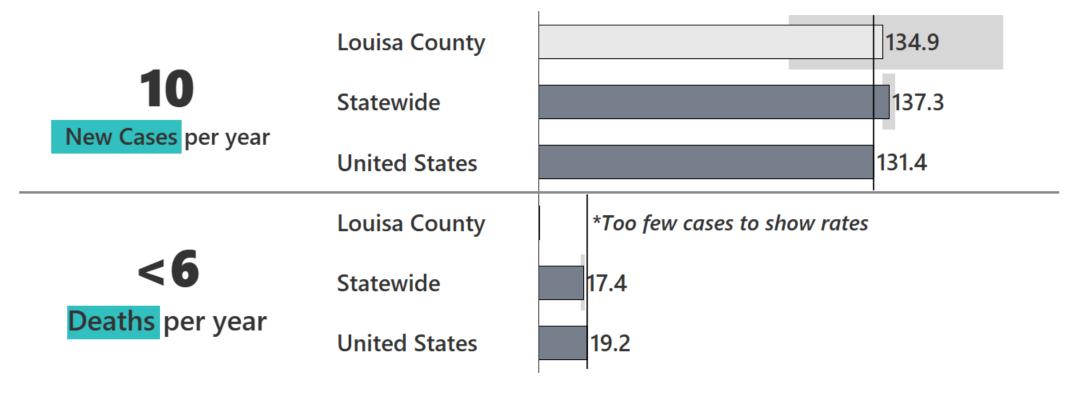

Age-Adjusted incidence rate per 100,000 (2018-2022)

Rank compared to other counties, where #1 is highest in the state

1 Female Breast

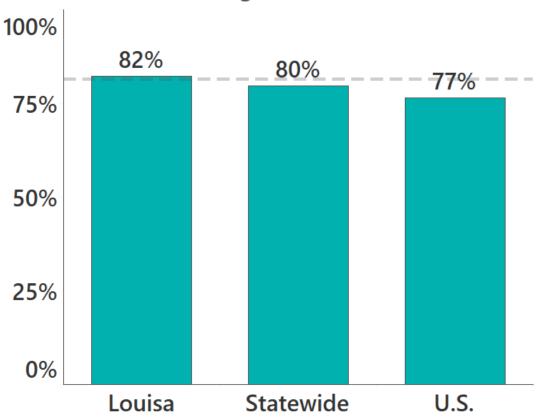

Each year in Louisa County, there are about...

Breast Cancer Screening

Women age 50+ who are up to date with their breast cancer screening

Screening Guidelines

Women ages 40-74 should screen with a mammogram every 2 years

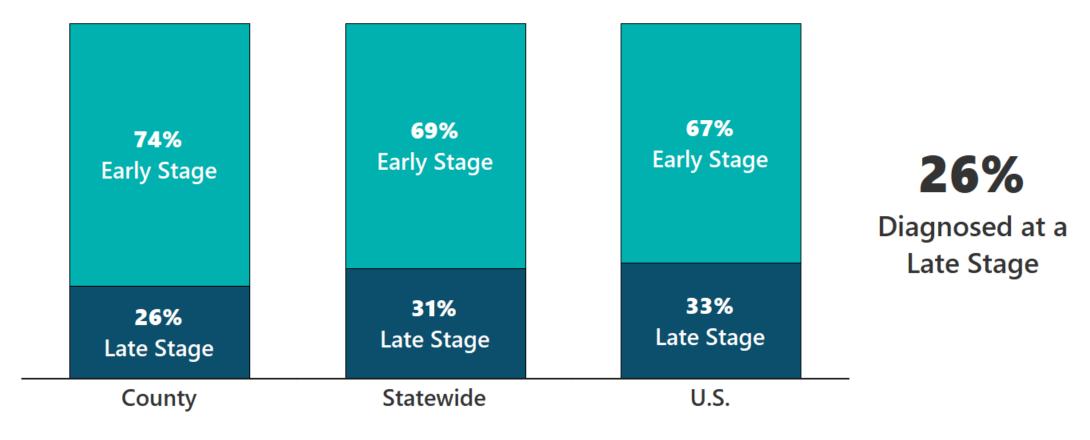

Talk to your doctor if you have a family history of breast cancer

Data from 2022 survey Goal: 81.4% by 2027

1 | Female Breast Cancer Stage at Diagnosis

Early stage = Easier to treat, Higher survival rates

The Care for Yourself – Breast and Cervical Cancer Program (CFY-BCC)

We provide free breast and cervical cancer screenings across lowa.

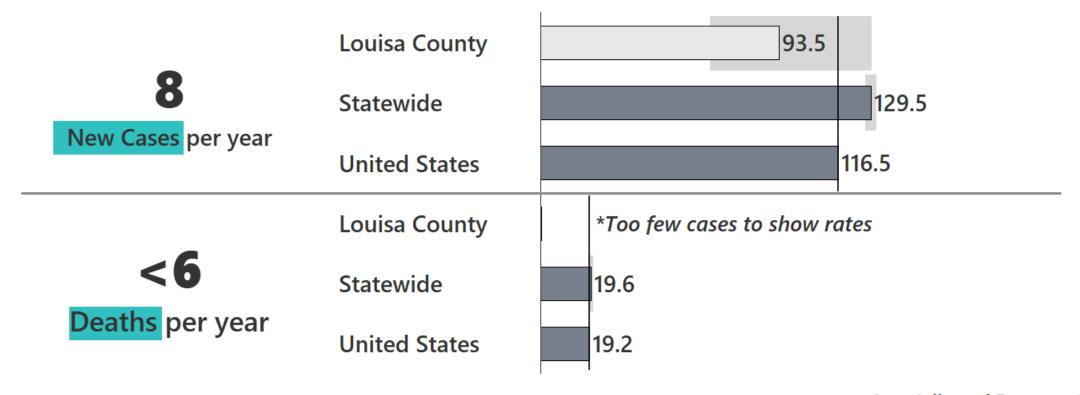

- ► CFY-BCC is also called the Iowa Breast and Cervical Cancer Early Detection Program.
- ► CFY-BCC serves Iowans between 21 and 64 years of age.
- ► Are at or earn less than 250% of the Federal Poverty Level.
- ► Call (866) 339-7909 to speak to a confidential coordinator immediately.
- ► CFY-BCC coordinators are available to help you Monday-Friday, 8:00 a.m. to 4:00 p.m.

https://hhs.iowa.gov/public-health/cancer/cfy

2 Prostate

Each year in Louisa County, there are about...

Prostate Cancer Screening

Screening Guidelines

Screening test: Prostate-specific antigen (PSA) blood test

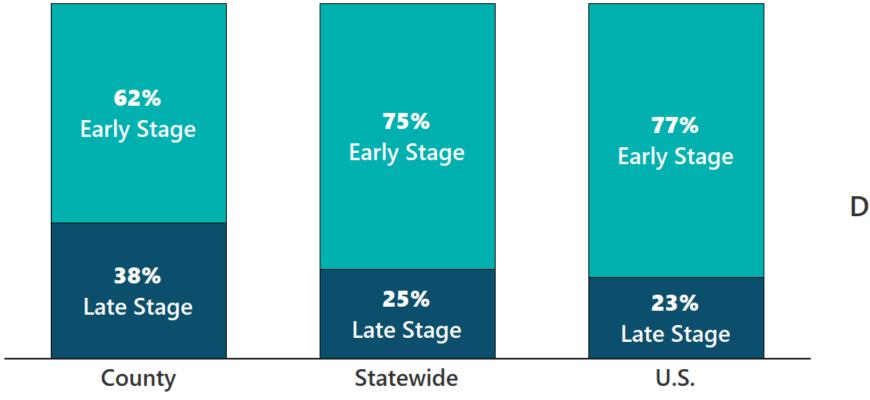

Men who are 55-69 years old, discuss with your doctor if a PSA test is right for you

(U.S. Preventative Services Task Force)

2 | Prostate Cancer Stage at Diagnosis

Early stage = Easier to treat, Higher survival rates

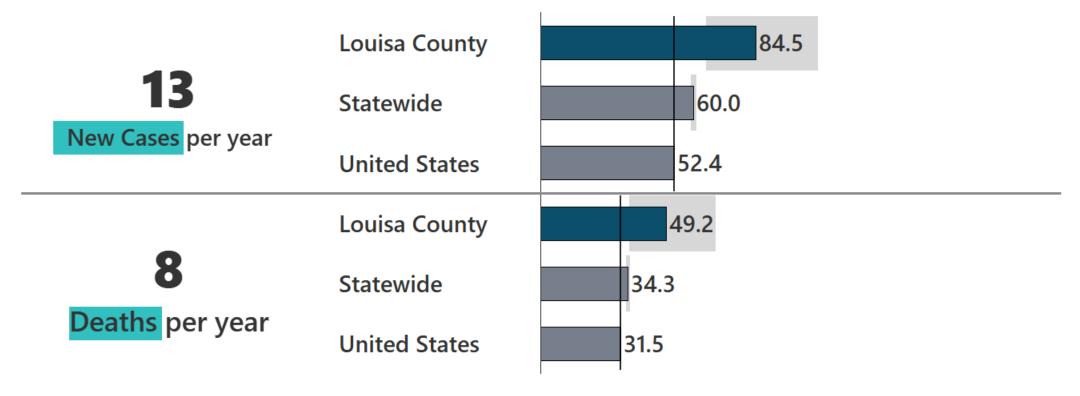

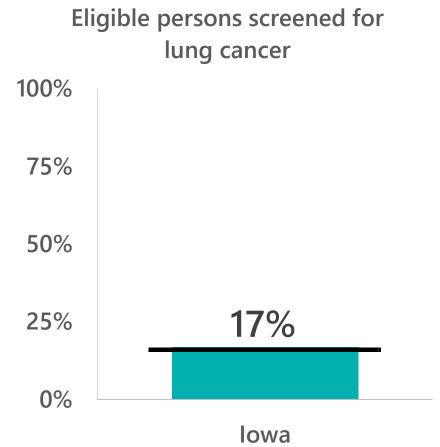

3 | Lung

Each year in Louisa County, there are about...

Lung Cancer Screening

Screening Guidelines

Low-dose CT scan

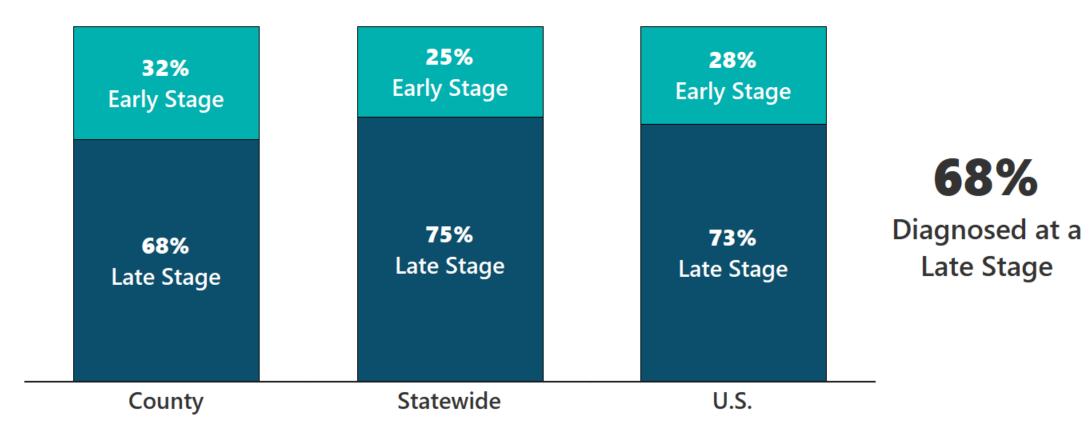

If you have smoked in the last 15 years and are between the ages 50-80 years talk to your doctor about being screened for lung cancer

(U.S. Preventative Services Task Force)

3 | Lung Cancer Stage at Diagnosis

Early stage = Easier to treat, Higher survival rates

Lung Cancer Risk Factors

Smoking is #1 cause of lung cancer

Radon is #2 leading cause of lung cancer Test your home for radon and mitigate

People who smoke that are exposed to radon are at a **10 to 20 times higher** risk of developing lung cancer than non-smokers

Learn more about Radon testing and mitigation:

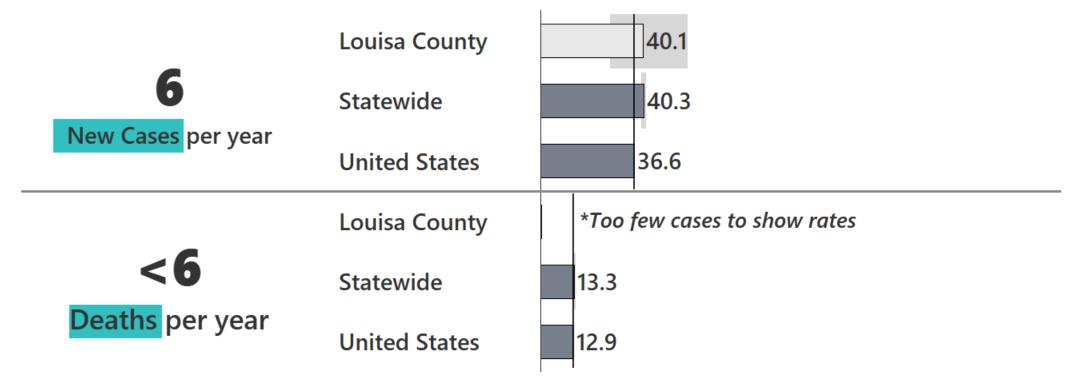

Iowa Health & Human Services hhs.iowa.gov/radiological-health/radon

Iowa Cancer Consortium canceriowa.org/radon/

4 | Colorectal

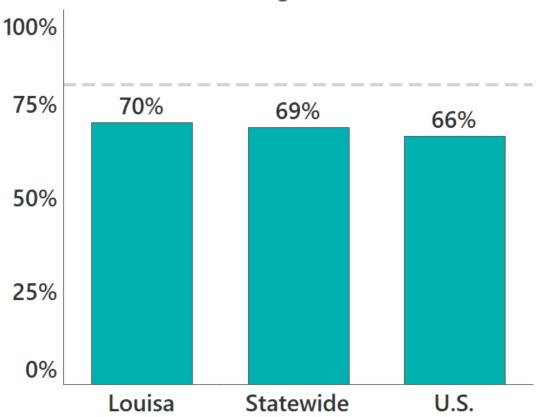

Each year in Louisa County, there are about...

Colorectal Cancer Screening

Adults ages 45-75 who are up to date with their colorectal cancer screening

Screening Guidelines

Adults ages 45-75 can screen with either (1) an at-home, stool-based test, or (2) a colonoscopy.

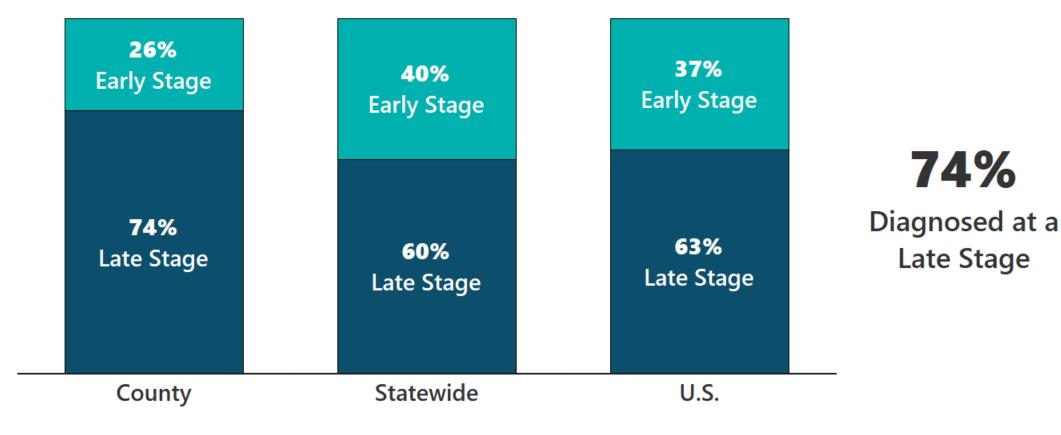

Talk to your doctor about which is best for you.

Data from 2022 survey Goal: 80% by 2027

4 | Colorectal Cancer Stage at Diagnosis

Early stage = Easier to treat, Higher survival rates

Iowa Get Screened (IGS): Colorectal Cancer Program

We partner with Iowa's Federally Qualified Health Centers (FQHCs) and local public health agencies to increase colorectal cancer screening.

Through a collaboration with the Iowa Primary Care Association (Iowa PCA) and FQHCs, the program serves low-income Iowans, ages 45-75, to:

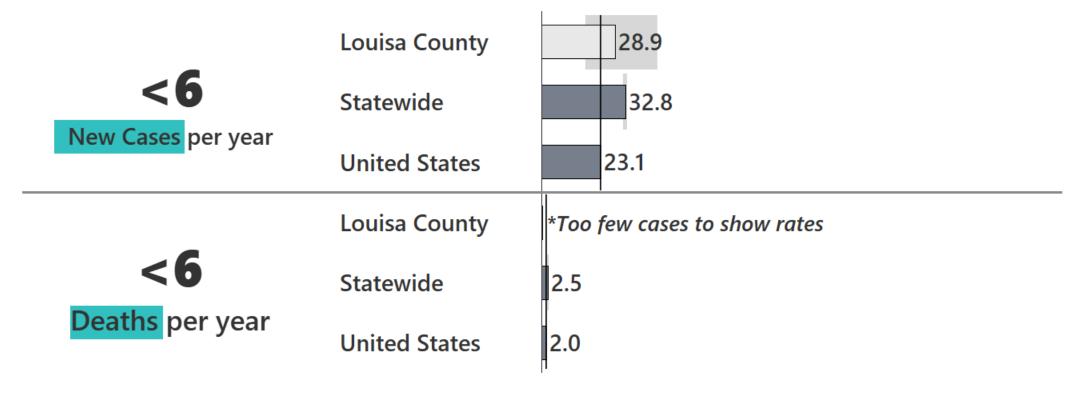

- ► Increase the number of cancers prevented
- ► Increase the diagnosis of early-stage colorectal cancer
- ► Reduce colorectal cancer incidence and mortality in the state

https://hhs.iowa.gov/public-health/cancer/colorectal-cancer-screening-program

5 | Melanoma

Each year in Louisa County, there are about...

Melanoma Self-Exams

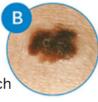

Perform regular self-examinations using a mirror. If you find new spots or changes in existing spots talk to your doctor.

Most moles and brown spots are harmless, but following the **ABCDE's** can help you detect melanoma early.

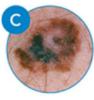

A is for Asymmetry

the shape of one half does not match the other

B is for **Border**

the edges are ragged, blurred, or irregular

C is for Color

color is uneven and may include shades of black, brown, or tan

D is for **Diameter**

there is a change in size, usually an increase

E is for Evolving

the mole has changed over the past few weeks or months

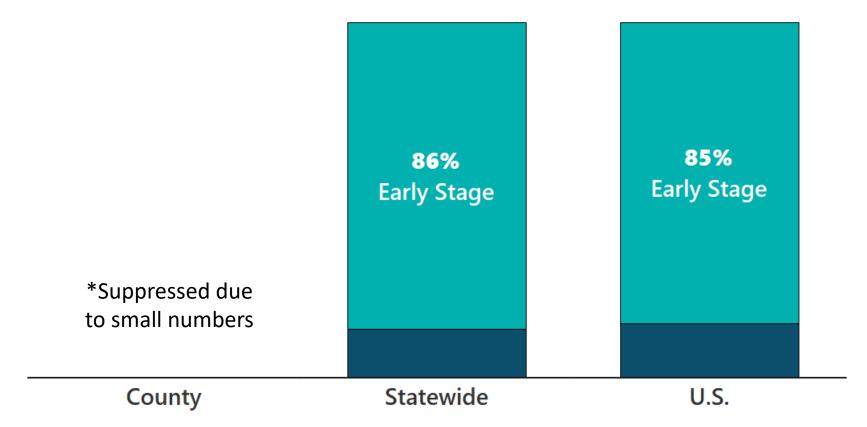

American Academy of Dermatologist

Check out the Iowa Cancer Registry Melanoma Spotlight

5 Melanoma Cancer Stage at Diagnosis

Early stage = Easier to treat, Higher survival rates

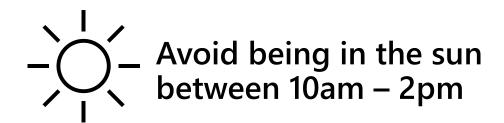

What can you do to prevent melanoma?

~92% of melanoma cases are attributable to UV exposure

Wear broad spectrum sunscreen with at least SPF 30

Do not use indoor tanning beds

Just one indoor tanning session increases a person's chances of developing melanoma by 20%

Using a tanning bed before age 35 increase a person's risk for melanoma by 75%

How can you reduce your risk for cancer?

~40% of cancers in the US are attributable to modifiable risk factors (i.e., smoking, alcohol, diet, infections, etc.)

Do not smoke or use any form of tobacco Make your home smoke-free

Enjoy a healthy diet

Avoid too much sun, use sun protection

Limit alcohol consumption

Be physically active

Vaccinate against Hepatitis B and HPV

Reduce indoor and outdoor air pollution (including radon)

Decrease excess body weight

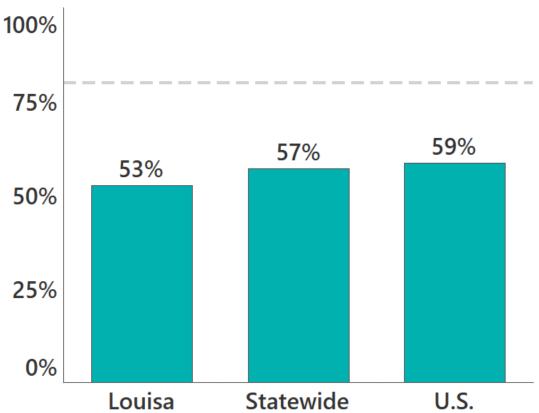

Get the appropriate cancer screenings for you!

A vaccine that prevents cancer: HPV

Adolescents ages 13-15 who have completed their HPV vaccine series (2022)

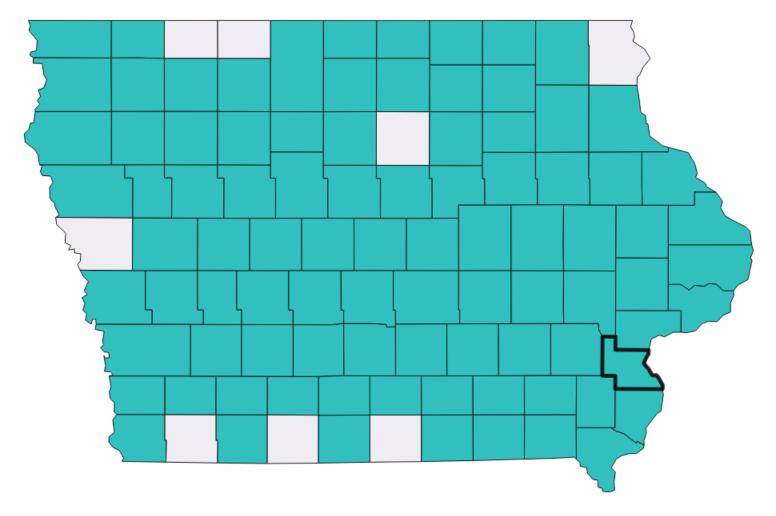

- HPV infection can cause cancers of the cervix, mouth and throat, anus, rectum, penis, vulva, and vagina.
- Iowa has the highest rate of oropharyngeal cancer in the U.S.
- Vaccine provides safe, effective, and lasting protection against HPV, thus reducing cancer risk
- Recommended at age 11 or 12 years, when immune response is best & before HPV exposure

Data from 2022 survey Goal: 80% by 2027

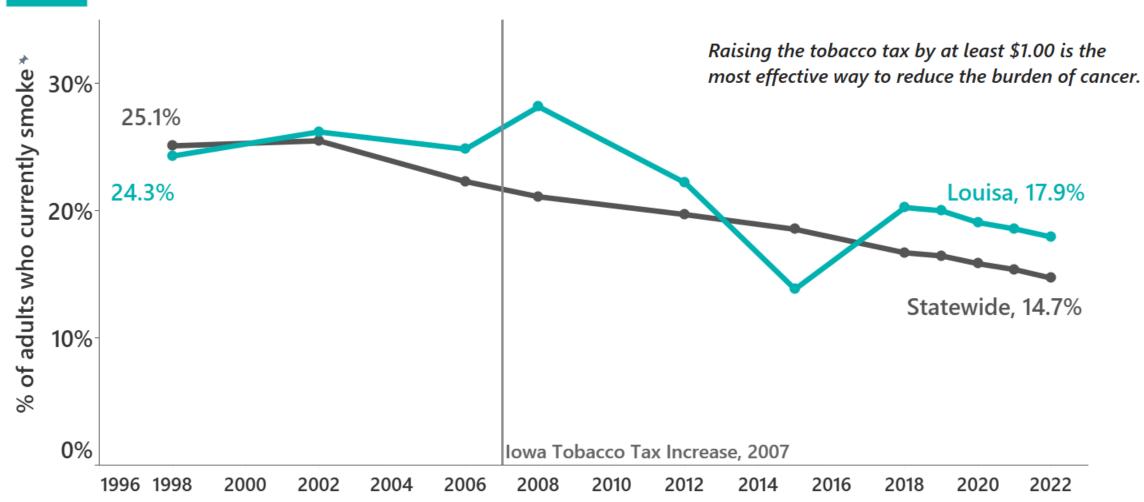

After the last tobacco tax was passed in 2007, smoking rates decreased in **92%** of Iowa counties

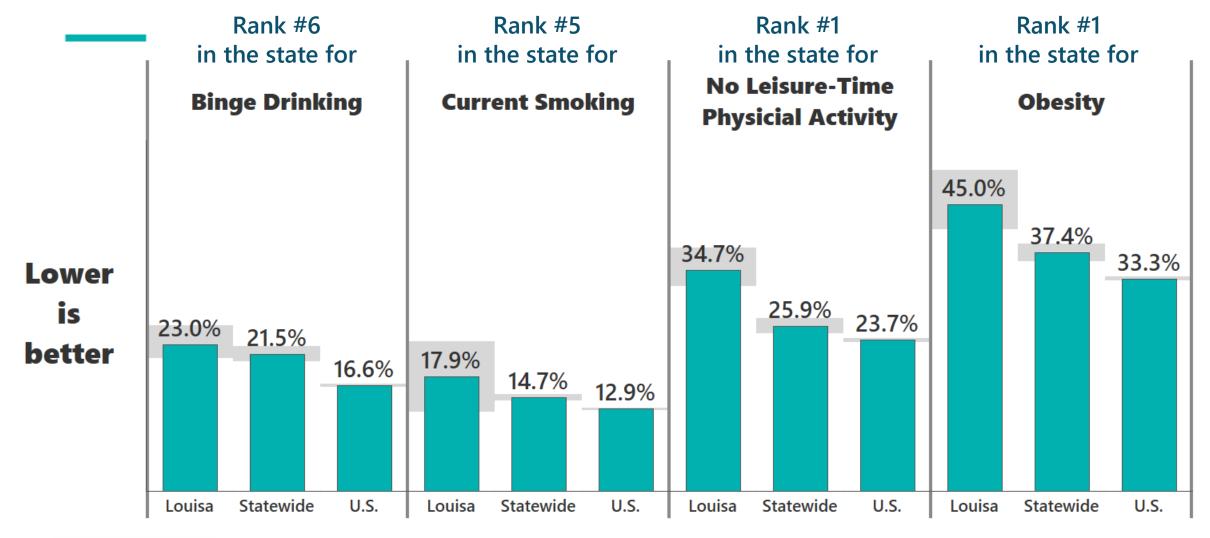

After the last increase to the tobacco tax was passed in 2007, smoking rates **decreased*** in Louisa County

*Determined by comparing data from 2004-2007 combined to 2011-2013 combined

Other Cancer Risk Factors

Want to know your cancer risk?

Take the American Cancer Society's cancer risk assessment to learn more about what factors might affect your personal cancer risk and actions you can take to help lower your risk.

Resources to help understand and address cancer in lowa communities

Iowa Comprehensive Cancer Control Program (CCCP)

Work with partners to prevent cancer whenever possible and support cancer survivors across lowa.

- ► The CCCP partners with many organizations, including the Iowa Cancer Consortium, Iowa's cancer coalition.
- ► CCCP is involved in the revision and implementation of the Iowa Cancer Plan.
- ► Currently CCCP is focused on increasing HPV vaccination, increasing lung cancer screening, and supporting cancer survivors.

https://hhs.iowa.gov/public-health/cancerhttps://canceriowa.org/iowa-cancer-plan/

lowa Cancer Consortium

Mission: To advance cancer prevention and control through advocacy, equity, and collaboration.

Vision: An Iowa where cancer is not a burden.

A non-profit cancer coalition that provides

- Connections and partnership
- Latest news and cancer updates via email
- Training and educational opportunities
- Grant opportunities and technical assistance
- Free cancer educational materials for distribution
- Virtually-hosted workgroups
- The Iowa Cancer Plan

www.canceriowa.org

Funded in part through a contract with the Iowa CCCP

Blueprint for cancer control, the lowa Cancer Plan

Chapters with sections that include priorities, strategies, and specific action steps which may be tailored to many settings to guide cancer control activities.

- 1. Health Equity: identify and eliminate cancer health disparities.
- **2. Prevention and Risk Reduction:** whenever possible, prevent cancer from occurring.
- 3. Early Detection and Screening: promote the benefits of screening tests to ensure early diagnosis.
- **4. Diagnosis and Cancer-Directed Therapy:** reduce barriers to care, promote evidence-based practices, and encourage participation in clinical trials and other forms of research.
- **5. Survivorship and End-of-Life Care:** ensure resources to optimize quality-of-life for cancer survivors and their families.

https://canceriowa.org/ iowa-cancer-plan/ "There is a lot we know about how to reduce our personal cancer risk. There is opportunity for the biggest impact when policies help us do that.

Effective policies

- -make the <u>healthy choice easier</u>
- -make the <u>unhealthy choice harder</u>
- -provide protections from risk factors that are out of an individual's control"

- Iowa Cancer Consortium

Policy Examples

State-level

- Increase the tobacco tax by at least \$1.00
- Raise taxes on alcohol and set minimum unit prices
- Prohibit minors' use of tanning beds

Community & Organization-level

- Implementing tobacco- and nicotinefree policies
- Zoning restrictions to prohibit tobacco shops from operating near schools or other tobacco retailers
- Set and enforce limits on the number of places that sell alcohol and the distance between them
- Reducing out-of-pocket costs for cessation treatments
- Build communities that provide natural opportunity for physical activity (walkable/ bikeable/ accessible)

- Ensure access to affordable fresh food
- Providing sunscreen and UV-safety education in outdoor occupational, recreation/tourism, and childcare settings
- Engaging community health workers, developing clinic-specific interventions, and supporting care navigation
- Include cancer-relevant strategies in your hospital's community health needs assessments or public health department's needs assessment

More ways to get involved

American Cancer Society Cancer Action Network

Engage American Cancer Society Cancer Action Network (ACSCAN) to promote cancer-relevant legislation

www.fightcancer.org

Contact your legislator

Find your legislator at

https://www.legis.iowa.gov/legislators/find

Every community is different

Your expertise is key

Your expertise as community members and leaders and local policy makers is key to answering the question of what to do next.

You know best what your community needs and what will work.

Cancer control partners can help

Cancer control partners can provide ideas, advise, and help find data, evidence, and other resources, but *ultimately* you are the experts.

Take stock of the information presented today

A good place to start is by **taking stock of the information presented today**

- Where are opportunities for change within your county, town, or organization?
- Use the Iowa Cancer Plan for inspiration.
- Reach out to the Iowa Cancer Consortium for partnership in moving forward.

Iowa Private Well Grants Program

Iowa Health & Human Services

lowa's <u>Private Well Grants Program</u> (PWG) provides free water testing to all private well owners and users for the analytes listed.

The Iowa DNR recommends that all private well owners have their water tested at least annually.

Analytes

- Bacteria/coliform (annually)
- E.coli/fecal coliform (annually)
- Nitrate (annually)
- Arsenic (every 3 years)
- Manganese (every 3 years)
- PFAS (requires pre-approval from the DNR)

Louisa County

The Private Well Grant is available for private well testing by Louisa County Environmental Health.

Contact Brian Thye for more information 319-931-6515

https://www.louisacountypublichealth.com/en vironmental.html

Resource Guide

Cancer in Iowa: 99 Counties Project

- Organizations and programs we presented today
- IHHS Programs
 - Tobacco Use Prevention and Control
 - Immunization Program
 - The Hepatitis Program
 - Radon
- Iowa Rural Health Association

In the next slides we will highlight...

- Cancer Cluster Concerns
- Agricultural Health Study
- Environmental Exposures and Health Risks Fact Sheets
- Iowa Private Well Grants Program
- Center for Health Effects of Environmental Contamination
- Center for Energy & Environmental Education's (CEEE)
 Environmental Health Program

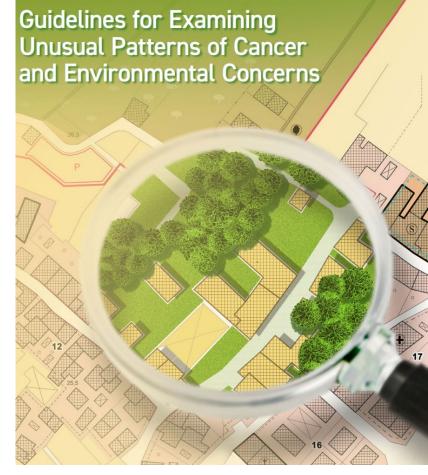

www.iowacancerregistry.org/99

What to do if you suspect a cancer cluster in your community

If you are concerned about cancer excess in your area, please email the Iowa Cancer Registry at

ICR-CancerConcerns@uiowa.edu

- We will ask you about the location, cancer types, and any exposure(s) of concern.
- If possible, ICR will conduct an analysis comparing the expected number of cancers to what's been observed.
- A meeting will be held to discuss the results.

Agricultural Health Study

The Agricultural Health Study (AHS) has been working for more than 30 years to understand factors that impact the health of farmers and their families.

The aim of this study is to understand how agricultural, lifestyle, and genetic factors affect the health of farming populations.

- Includes over 31,000 private and 5,000 commercial pesticide applicators from Iowa. Study is also following applicator's spouses and children
- Linked with Iowa Cancer Registry data to study risk of developing cancer among pesticide applicators

Environmental Exposures & Health Risks Fact Sheets

Environmental Health Sciences Research Center

Include information on

- Cancer and non-cancer health risks for each environmental exposure
- How the exposures are regulated
- What you can do to limit your exposure

Environmental Health Fact Sheets

Arsenic

PFAS

- Atrazine
- TCE
- Glyphosate
- Nitrate
- Radon

Nitrate & Health Fact sheet

Introduction

"[...]consistent associations have been discovered for colorectal cancer.

[...] less studied, however, positive associations have been found at levels below the MCL for cancers of the thyroid, ovary, and kidney"

Cance Health Risks International Agency for Research on Cancer (IARC) classifies nitrate in food water as "probably carcinogenic to humans" (1, 5). Studies conducted in Iowa e shown a positive correlation between exposure to nitrate in the drinking water d some cancers (1). Some studies conducted in Iowa have analyzed cancer risk at or above levels one-half the maximimum contaminant level (MCL) over long periods of time. From these studies, consistent associations have been discovered for colorectal cancer. Cancers at other sites have been less studied, however, positive associations have been found at levels below the MCL for cancers of the thyroid, ovary, and kidney (6).

Non-Cancer Health Risks Methemoglobinemia, or Blue Baby Syndrome, is a condition in which not enough oxygen is transported in the blood to the body's tissues (3). Blue Baby Syndrome can occur when infants are exposed to nitrate levels higher than 10 mg/L. Elevated prenatal nitrate exposure in Iowa has also been connected to increased risk of birth defects, including spina bifida, limb deficiencies, and cleft palate (7,8).

How is Nitrate regulated?

- The EPA established the maximum contaminant level for nitrate to be 10 mg/L in drinking water, to protect infants against methemoglobinemia, or Blue Baby Syndrome (7, 9).
- Public water suppliers must test for nitrate and present results to consumers and the state through consumer confidence reports (3).
- Private wells are not required to be tested for nitrate, and those with water sourced from a shallow well, less than 50 feet, face a disproportionate risk of high nitrate exposure (3,10).

What can you do?

- Test well water for nitrate once a year if the well is privately-owned.
- Water purification methods that remove nitrate include reverse osmosis, ion exchange, and distillation. Using Brita filters, refrigerator filters, and boiling water are not effective at removing nitrate (7).
- Maintain a healthy diet rich in antioxidants and limited in processed, cured, and red meats (1). Published September 2024 Questions? Visit our website EHSRC.org

https://ehsrc.public-health.uiowa.edu/communityengagement/resources-information/

Center for Health Effects of Environmental Contamination (CHEEC)

University of Iowa

CHEEC supports and conducts research to identify, measure and study adverse health outcomes related to exposure to environmental toxins.

CHEEC was established through the 1987 Iowa Groundwater Protection Act and has focused its efforts to date mainly on drinking water contaminants.

For questions about environmental contaminants, please contact CHEEC at the email address below.

Center for Energy & Environmental Education's (CEEE) Environmental Health Program

Highlighting upstream solutions to protect children, climate, and health.

Raises awareness about the link between harmful chemicals and their impacts to both people and climate.

Initiatives focus on community practices and state strategies that significantly reduce lowan's exposure to common hazardous pollutants.

Contact for more information and resources about how to reduce environmental exposures that may contribute to cancer development.

Other initiatives in Iowa

Cancer and Environmental Risk Factors in Iowa

The Harkin Institute and the Iowa Environmental Council are exploring the relationship between environmental risk factors and cancer rates in Iowa.

https://www.iaenvironment.org/our-work/cancer-and-environmental-risk-factors-in-iowa/

Expert Panel

UI Holden Cancer Center is bringing renowned national and international cancer experts together to investigate lowa's cancer rates.

Cancer Drivers in Iowa

Governor Reynolds and the legislature passed Senate File 647, which created a collaborative project with Iowa Health and Human Services and the University of Iowa College of Public Health to examine the factors behind the rise in cancer rates in Iowa.

https://iphprp.org/cancer-drivers-in-iowa/

Main Takeaways

Cancer is an important health issue facing your county.

There are proven ways to prevent cancer & find it early.

You can avoid risk factors and get screened.

Iowa has a strong
Cancer Plan,
resources, &
organizations to
help fight cancer.

Policy changes at the local and state levels can have a huge impact!

Please communicate your concerns & needs with your state representatives and local policymakers.

This is only the first step.

If you would like to **share your thoughts** on this meeting, please participate in our brief survey. The QR code will direct you to the survey.

This brief survey should take no more than 5-10 minutes of your time.
