

Cancer in Madison County

Whitney Zahnd, PhD & Amanda Kahl, MPH

November 12, 2025

Who we are

Whitney Zahnd, PhD

- Assistant Professor, University of Iowa College of Public Health
- Past-president of the Iowa Rural Health Association
- Member of the Cancer Epidemiology and Population Sciences Program, Holden Comprehensive Cancer Center
- Research: rural-urban differences in cancer prevention, incidence and outcomes, access to care

Amanda Kahl, MPH

- Epidemiologist, Iowa Cancer Registry
- Assistant Director of Catchment Area Data, Community Outreach & Engagement, Holden Comprehensive Cancer Center
- Research: rural-urban differences in treatment and quality of cancer care; cancer registry data quality

These slides will be posted

These slides will be posted to the Iowa Cancer Registry website:

www.iowacancerregistry.org/99

If you have questions after, please email us at ICR-99countiesproject@uiowa.edu

Media

If you are a representative of the media and would like more information on this presentation or to speak with someone from the Iowa Cancer Registry, contact ICR-Media@uiowa.edu.

Survey

We would appreciate your feedback on this presentation.

We will send & post a link to a brief survey after this presentation.

99 Counties Project Team

Iowa Cancer
Consortium

IOWA
HEALTH CARE
Holden Comprehensive
Cancer Center

IOWA™ | Health and
Human Services

**“Statistics are people
with the tears wiped away”**

Dr. Irving Selikoff

Iowa has the **#2** highest rate of **new cancers** in the U.S.

Iowa's rate is **14% higher** than the U.S. rate

2020 data not included

Iowa has the **#23** highest rate of **cancer deaths** in the U.S.

Iowa's rate is **3% higher** than the U.S. rate

Rate of Cancer Deaths

Over half of Iowa's counties have a higher incidence rate than the U.S.

59 Counties with rate **OVER** the national average

1 County with rate **BELOW** the national average

■ Above National Average
■ Below National Average
■ Similar to National Average

2018-2022 Incidence

About the Project

Goal: to enhance community engagement & education around cancer prevention and control across all of Iowa's 99 counties.

Present county-specific cancer data

Listen

Provide
Resources

Recommend
actions

There are Many Cancer Control Partners in Iowa

State Government

Governor

- Implement state laws
- Advance and pursue policies and programs

Iowa Legislature

- Propose and vote on legislation
- Appropriate money to state agencies and programs
- Create and modify Iowa laws

Bureau of Chronic, Congenital and Inherited Conditions

Comprehensive Cancer Control Program

Cancer prevention, screening, survivorship

Care for Yourself
(Breast & Cervical Cancer Program)

Colorectal Cancer Screening Program

Bureau of Environmental Health Services

- Track environmental health-related diseases
- Assist local boards of health

Local (County) Public Health Services/Boards of Health

- Address health priorities and health disparities
- Promote healthy living
- Protect against environmental hazards
- Assure access to health services

Unity Point, MercyOne, Great River, Avera, Mayo, Methodist, Gundersen, Sanford and numerous independent **health systems, hospitals and clinics across Iowa**

Provide cancer prevention, screening, treatment, and survivorship services

Iowa Cancer Consortium

Advocate, collaborate, plan

Iowa Cancer Action Network

Advocate for better policies

ACS Iowa

Help with cancer treatment and recovery

Holden Comprehensive Cancer Center

Iowa's only NCI Designated Cancer Center

Health Care, research, education

Data, support research & education

UI Research Centers

Center for Health Effects of Environmental Contamination

Iowa Cancer Registry Goals

Assemble & report data on new cancers, cancer deaths, & survival

Respond to **data requests** from organizations & individuals

Support studies for cancer prevention, research & education

Federal Funding for Cancer Control in Iowa

- The Iowa Cancer Registry is funded in part with Federal funds from the **National Cancer Institute (National Institutes of Health)**, Department of Health and Human Services, under Contract No. HHSN261201800012I
- The Cancer in Iowa: 99 Counties Project is specifically funded by Federal funds from the **National Cancer Institute** through grant award: 5R01CA254628-04S2, and through National Cancer Institute funds provided to the University of Iowa Holden Comprehensive Cancer Center (P30CA086862)
- The Iowa Cancer Consortium acknowledges the **Centers for Disease Control and Prevention (CDC)** for its funding support under cooperative agreement NU58DP007103 awarded to the Iowa Department of Health and Human Services (Iowa HHS).

The contents of this presentation are solely the responsibility of the authors and do not necessarily represent the official views of CDC or the National Institutes of Health/National Cancer Institute.

Background on Cancer

Cancer is Complicated

There is no one cause of cancer; it is a combination of different **genetic, lifestyle,** and **environmental** risk factors that change the function of cells

Cancer is Complicated

Risk factors are things that increase your chances of getting cancer

- Tobacco
- Alcohol
- Unhealthy diet
- Not being physically active
- Sunburns

- Family history of cancer
- Random mutations

- Exposure to chemicals
- Radiation

- **Aging**
- Viruses (HPV, HIV)
- Medical conditions like chronic inflammation

Cancer & the Environment

- Many Iowans understandably have questions about potential links between environmental exposures and cancer
- This is an important area of continued research, and Iowans are right to ask questions and be cautious
- ICR, along with other population-based cancer registries, do not collect data on environmental risk factors, but we do share our data with researchers to support studies of cancer & environmental risk factors

Risk Factors

- There can be many years between exposure to risk factors & cancer development, which makes it difficult to prove connections.
 - For example, lung cancer may not occur until 30 years after a person starts smoking
- Today we will focus on things you can do to reduce your cancer risk. These things can be addressed at the state, community, and individual levels.

Key Terms

Incidence & Mortality

- Incidence
 - Number of **new cases** of cancer occurring during a specified time period in a population
- Mortality
 - Number of **deaths** from cancer that occur during a specified time period in a population

Rates & Counts

- Counts
 - The **number** of new cases diagnosed or deaths from cancer
- Age-Adjusted Rates
 - Addresses the question: *If the size and age of the populations were the same, would there be a difference in outcomes?*
 - Adjusts the counts to give a **# per 100,000 people**

Stage definition used today

- Early Stage includes
 - Localized: cancer is limited to the place where it started, with no sign that it has spread
- Late Stage includes
 - Regional: cancer has spread to nearby lymph nodes, tissues, or organs
 - Distant: cancer has spread to distant parts of the body

<https://www.cancer.gov/about-cancer/diagnosis-staging/staging>

How to read the graphs

Unless otherwise stated,
bars are your county data

Black lines on
bar graphs
are United
States data

Grey boxes on
bar graphs are
95% Confidence
Intervals.

These are used to
determine if rates
are statistically
different from
each other

Cancer in Madison County

New Cancers in Madison County

All cancer types, average counts and rates, 2018-2022

Each year, there are about

113

new cancers diagnosed in
Madison County

Cancer incidence rates in Madison
County are **higher than the U.S.
average**

Ranks #11 of 99 counties

Cancer incidence rates are typically
higher in men than women

Age-Adjusted incidence rate per 100,000 (2018-2022)

Cancer deaths in Madison County

All cancer types, average counts and rates, 2019-2023

Each year, there are about

37

cancer deaths in Madison County

Cancer mortality rates in Madison County
are **higher than the U.S. average**

Ranks #11 of 99 counties

Cancer mortality rates are typically
higher in men than women

Age-Adjusted mortality rate per 100,000 (2019-2023)

Pediatric, Adolescent, and Young Adult New Cancers in Iowa

Pediatric cancer incidence rates in Iowa are **not different** than the U.S. rate

Adolescent cancer incidence rates in Iowa are **not different** than the U.S. rate

Young Adult cancer incidence rates in **Iowa are higher** and **Madison County are not different** than the U.S. rate

Age-Adjusted incidence rate per 100,000 (2018-2022)

Top cancers in Madison County

Age-Adjusted incidence rate per 100,000 (2018-2022)

Rank compared to other counties, where #1 is highest in the state

1 | Prostate

Each year in Madison County, there are about...

17

New Cases per year

Madison County

152.6

Statewide

129.5

United States

116.5

<6

Deaths per year

Madison County

**Too few cases to show rates*

Statewide

19.6

United States

19.2

Age-Adjusted Rate per 100,000
Incidence (2018-2022); Mortality (2019-2023)

Prostate Cancer Screening

Screening Guidelines

Screening test: Prostate-specific antigen (PSA) blood test

Men who are 55-69 years old, discuss with your doctor if
a PSA test is right for you

(U.S. Preventative Services Task Force)

1 | Prostate Cancer Stage at Diagnosis

Early stage = Easier to treat, Higher survival rates

22%
Diagnosed at a
Late Stage

2 | Female Breast

Each year in Madison
County, there are about...

16

New Cases per year

Madison County

150.4

Statewide

137.3

United States

131.4

<6

Deaths per year

Madison County

**Too few cases to show rates*

Statewide

17.4

United States

19.2

Age-Adjusted Rate per 100,000
Incidence (2018-2022); Mortality (2019-2023)

Breast Cancer Screening

Women age 50+ who are up to date with their breast cancer screening

Screening Guidelines

Women ages 40-74 should screen with a mammogram every 2 years

Talk to your doctor if you have a family history of breast cancer

*Data from 2022 survey
Goal: 81.4% by 2027*

2 | Female Breast Cancer Stage at Diagnosis

Early stage = Easier to treat, Higher survival rates

The Care for Yourself – Breast and Cervical Cancer Program (CFY-BCC)

We provide free breast and cervical cancer screenings across Iowa.

- ▶ CFY-BCC is also called the Iowa Breast and Cervical Cancer Early Detection Program.
- ▶ CFY-BCC serves Iowans between 21 and 64 years of age.
- ▶ Are at or earn less than 250% of the Federal Poverty Level.
- ▶ Call (866) 339-7909 to speak to a confidential coordinator immediately.
- ▶ CFY-BCC coordinators are available to help you Monday-Friday, 8:00 a.m. to 4:00 p.m.

<https://hhs.iowa.gov/public-health/cancer/cfy>

3 | Lung

Each year in Madison County, there are about...

13

New Cases per year

7

Deaths per year

Madison County

57.5

Statewide

60.0

United States

52.4

Madison County

33.4

Statewide

34.3

United States

31.5

Age-Adjusted Rate per 100,000
Incidence (2018-2022); Mortality (2019-2023)

Lung Cancer Screening

Screening Guidelines

Low-dose CT scan

If you have smoked in the last 15 years and are between the ages 50-80 years talk to your doctor about being screened for lung cancer

(U.S. Preventative Services Task Force)

3 | Lung Cancer Stage at Diagnosis

Early stage = Easier to treat, Higher survival rates

Data from 2013-2022

Lung Cancer Risk Factors

Smoking is #1 cause of lung cancer

Radon is #2 leading cause of lung cancer
Test your home for radon and mitigate

People who smoke that are exposed to radon are
at a **10 to 20 times higher** risk of developing
lung cancer than non-smokers

**Learn more about Radon testing
and mitigation:**

Iowa Health & Human Services
hhs.iowa.gov/radiological-health/radon

Iowa Cancer Consortium
canceriowa.org/radon/

4 | Colorectal

Each year in Madison
County, there are about...

10

New Cases per year

<6

Deaths per year

Age-Adjusted Rate per 100,000
Incidence (2018-2022); Mortality (2019-2023)

Colorectal Cancer Screening

Adults ages 45-75 who are up to date with their colorectal cancer screening

Screening Guidelines

Adults ages 45-75 can screen with either (1) an at-home, stool-based test, or (2) a colonoscopy.

Talk to your doctor about which is best for you.

Data from 2022 survey
Goal: 80% by 2027

4 | Colorectal Cancer Stage at Diagnosis

Early stage = Easier to treat, Higher survival rates

54%
Diagnosed at a
Late Stage

Iowa Get Screened (IGS): Colorectal Cancer Program

We partner with Iowa's Federally Qualified Health Centers (FQHCs) and local public health agencies to increase colorectal cancer screening.

Through a collaboration with the Iowa Primary Care Association (Iowa PCA) and FQHCs, the program serves low-income Iowans, ages 45-75, to:

- ▶ Increase the number of cancers prevented
- ▶ Increase the diagnosis of early-stage colorectal cancer
- ▶ Reduce colorectal cancer incidence and mortality in the state

<https://hhs.iowa.gov/public-health/cancer/colorectal-cancer-screening-program>

5 | Melanoma

Each year in Madison County, there are about...

7

New Cases per year

Madison County

Statewide

United States

<6

Deaths per year

Madison County

**Too few cases to show rates*

Statewide

2.5

United States

2.0

Age-Adjusted Rate per 100,000
Incidence (2018-2022); Mortality (2019-2023)

Melanoma Self-Exams

Perform regular self-examinations using a mirror. **If you find new spots or changes in existing spots** talk to your doctor.

Most moles and brown spots are harmless, but following the **ABCDE's** can help you detect melanoma early.

A is for
Asymmetry

the shape of one half does not match the other

B is for
Border

the edges are ragged, blurred, or irregular

C is for
Color

color is uneven and may include shades of black, brown, or tan

D is for
Diameter

there is a change in size, usually an increase

E is for
Evolving

the mole has changed over the past few weeks or months

American Academy of Dermatologist

[Check out the Iowa Cancer Registry Melanoma Spotlight](#)

5 | Melanoma Cancer Stage at Diagnosis

Early stage = Easier to treat, Higher survival rates

22%
Diagnosed at a
Late Stage

What can you do to prevent melanoma?

~92% of melanoma cases are attributable to UV exposure

Wear broad spectrum sunscreen with at least SPF 30

Avoid being in the sun between 10am – 2pm

Wear long sleeves and hats and sit in the shade when outdoors

Do not use indoor tanning beds

Just one indoor tanning session increases a person's chances of developing melanoma by 20%

Using a tanning bed before age 35 increase a person's risk for melanoma by 75%

How can you reduce your risk for cancer?

~**40%** of cancers in the US are attributable to modifiable risk factors
(i.e., smoking, alcohol, diet, infections, etc.)

Do not smoke or use
any form of tobacco
Make your home
smoke-free

Enjoy a healthy diet

Avoid too much sun,
use sun protection

Limit alcohol
consumption

Be physically active

Vaccinate against
Hepatitis B and HPV

Reduce indoor and
outdoor air pollution
(including radon)

Decrease excess
body weight

Get the appropriate
cancer screenings for you!

A vaccine that prevents cancer: HPV

Adolescents ages 13-15 who have completed their HPV vaccine series (2022)

- HPV infection can cause cancers of the cervix, mouth and throat, anus, rectum, penis, vulva, and vagina.
- Iowa has the highest rate of oropharyngeal cancer in the U.S.
- Vaccine provides safe, effective, and lasting protection against HPV, thus reducing cancer risk
- Recommended at age 11 or 12 years, when immune response is best & before HPV exposure

*Data from 2022 survey
Goal: 80% by 2027*

After the last tobacco tax was passed in 2007,
smoking rates **decreased** in **92%** of Iowa counties

After the last increase to the tobacco tax was passed in 2007, smoking rates **decreased*** in Madison County

**Determined by comparing data from 2004-2007 combined to 2011-2013 combined*

Other Cancer Risk Factors

**Lower
is
better**

Want to know your cancer risk?

Take the American Cancer Society's cancer risk assessment to learn more about what factors might affect your personal cancer risk and actions you can take to help lower your risk.

Resources to help understand and address cancer in Iowa communities

Iowa Comprehensive Cancer Control Program (CCCCP)

Work with partners to prevent cancer whenever possible and support cancer survivors across Iowa.

- ▶ The CCCCp partners with many organizations, including the Iowa Cancer Consortium, Iowa's cancer coalition.
- ▶ CCCCp is involved in the revision and implementation of the Iowa Cancer Plan.
- ▶ Currently CCCCp is focused on increasing HPV vaccination, increasing lung cancer screening, and supporting cancer survivors.

<https://hhs.iowa.gov/public-health/cancer>
<https://canceriowa.org/iowa-cancer-plan/>

Iowa Cancer Consortium

Mission: To advance cancer prevention and control through advocacy, equity, and collaboration.

Vision: An Iowa where cancer is not a burden.

A non-profit cancer coalition that provides

- Connections and partnership
- Latest news and cancer updates via email
- Training and educational opportunities
- Grant opportunities and technical assistance
- Free cancer educational materials for distribution
- Virtually-hosted workgroups
- The Iowa Cancer Plan

www.canceriowa.org

Funded in part through a contract with the Iowa CCCCp

Health and
Human Services

Iowa Cancer
Consortium

Blueprint for cancer control, the Iowa Cancer Plan

Chapters with sections that include priorities, strategies, and specific action steps which may be tailored to many settings to guide cancer control activities.

- 1. Health Equity:** identify and eliminate cancer health disparities.
- 2. Prevention and Risk Reduction:** whenever possible, prevent cancer from occurring.
- 3. Early Detection and Screening:** promote the benefits of screening tests to ensure early diagnosis.
- 4. Diagnosis and Cancer-Directed Therapy:** reduce barriers to care, promote evidence-based practices, and encourage participation in clinical trials and other forms of research.
- 5. Survivorship and End-of-Life Care:** ensure resources to optimize quality-of-life for cancer survivors and their families.

[https://canceriowa.org/
iowa-cancer-plan/](https://canceriowa.org/iowa-cancer-plan/)

"There is a lot we know about how to reduce our personal cancer risk. There is opportunity for the biggest impact when policies help us do that.

Effective policies

- make the healthy choice easier
- make the unhealthy choice harder
- provide protections from risk factors that are out of an individual's control"

- Iowa Cancer Consortium

Policy Examples

State-level

- Increase the tobacco tax by at least \$1.00
- Raise taxes on alcohol and set minimum unit prices
- Prohibit minors' use of tanning beds

Community & Organization-level

- Implementing tobacco- and nicotine-free policies
 - Zoning restrictions to prohibit tobacco shops from operating near schools or other tobacco retailers
 - Set and enforce limits on the number of places that sell alcohol and the distance between them
 - Reducing out-of-pocket costs for cessation treatments
 - Build communities that provide natural opportunity for physical activity (walkable/ bikeable/ accessible)
- Ensure access to affordable fresh food
 - Providing sunscreen and UV-safety education in outdoor occupational, recreation/tourism, and childcare settings
 - Engaging community health workers, developing clinic-specific interventions, and supporting care navigation
 - Include cancer-relevant strategies in your hospital's community health needs assessments or public health department's needs assessment

More ways to get involved

American Cancer Society Cancer Action Network

Engage American Cancer Society Cancer Action Network (ACSCAN) to promote cancer-relevant legislation

Every community is different

Your expertise is key

Your expertise as community members and leaders and local policy makers **is key to answering the question of what to do next.**

You know best what your community needs and what will work.

Cancer control partners can help

Cancer control partners can provide ideas, advise, and help find data, evidence, and other resources, but *ultimately you are the experts.*

Take stock of the information presented today

A good place to start is by **taking stock of the information presented today**

- Where are opportunities for change within your county, town, or organization?
- Use the Iowa Cancer Plan for inspiration.
- Reach out to the Iowa Cancer Consortium for partnership in moving forward.

Resource Guide

Cancer in Iowa: 99 Counties Project

- Organizations and programs we presented today
- IHHS Programs
 - Tobacco Use Prevention and Control
 - Immunization Program
 - The Hepatitis Program
 - Radon
- Iowa Rural Health Association

In the next slides we will highlight...

- Cancer Cluster Concerns
- Agricultural Health Study
- Environmental Exposures and Health Risks Fact Sheets
- Iowa Private Well Grants Program
- Center for Health Effects of Environmental Contamination
- Center for Energy & Environmental Education's (CEEE) Environmental Health Program

www.iowacancerregistry.org/99

What to do if you suspect a cancer cluster in your community

If you are concerned about cancer excess in your area, please email the Iowa Cancer Registry at

ICR-CancerConcerns@uiowa.edu

- We will ask you about the location, cancer types, and any exposure(s) of concern.
- If possible, ICR will conduct an analysis comparing the expected number of cancers to what's been observed.
- A meeting will be held to discuss the results.

Agricultural Health Study

The Agricultural Health Study (AHS) has been working for more than 30 years to understand factors that impact the health of farmers and their families.

The aim of this study is to understand how agricultural, lifestyle, and genetic factors affect the health of farming populations.

- Includes over 31,000 private and 5,000 commercial pesticide applicators from Iowa. Study is also following applicator's spouses and children
- Linked with Iowa Cancer Registry data to study risk of developing cancer among pesticide applicators

Environmental Exposures & Health Risks Fact Sheets

Environmental Health Sciences Research Center

Include information on

- Cancer and non-cancer health risks for each environmental exposure
- How the exposures are regulated
- What you can do to limit your exposure

Environmental Health Fact Sheets

- Arsenic
- PFAS
- Atrazine
- TCE
- Glyphosate
- Nitrate
- Radon

Nitrate & Health Fact sheet

IOWA
College of Public Health

Introduction

"[...]consistent associations have been discovered for colorectal cancer. [...] less studied, however, positive associations have been found at levels below the MCL for cancers of the thyroid, ovary, and kidney"

Health Risks Associated with Nitrate

Cancer Health Risks

The International Agency for Research on Cancer (IARC) classifies nitrate in food and water as "probably carcinogenic to humans" (1, 5). Studies conducted in Iowa have shown a positive correlation between exposure to nitrate in the drinking water and some cancers (1). Some studies conducted in Iowa have analyzed cancer risk at or above levels one-half the maximum contaminant level (MCL) over long periods of time. From these studies, consistent associations have been discovered for colorectal cancer. Cancers at other sites have been less studied, however, positive associations have been found at levels below the MCL for cancers of the thyroid, ovary, and kidney (6).

Non-Cancer Health Risks

Methemoglobinemia, or Blue Baby Syndrome, is a condition in which not enough oxygen is transported in the blood to the body's tissues (3). Blue Baby Syndrome can occur when infants are exposed to nitrate levels higher than 10 mg/L. Elevated prenatal nitrate exposure in Iowa has also been connected to increased risk of birth defects, including spina bifida, limb deficiencies, and cleft palate (7,8).

How is Nitrate regulated?

- The EPA established the maximum contaminant level for nitrate to be 10 mg/L in drinking water, to protect infants against methemoglobinemia, or Blue Baby Syndrome (7, 9).
- Public water suppliers must test for nitrate and present results to consumers and the state through consumer confidence reports (3).
- Private wells are not required to be tested for nitrate, and those with water sourced from a shallow well, less than 50 feet, face a disproportionate risk of high nitrate exposure (3,10).

What can you do?

- Test well water for nitrate once a year if the well is privately-owned.
- Water purification methods that remove nitrate include reverse osmosis, ion exchange, and distillation. Using Brita filters, refrigerator filters, and boiling water are not effective at removing nitrate (7).
- Maintain a healthy diet rich in antioxidants and limited in processed, cured, and red meats (1). **Published September 2024**
Questions? Visit our website EHSRC.org

Iowa Private Well Grants Program

Iowa Health & Human Services

Iowa's [Private Well Grants Program](#) (PWG) provides free water testing to all private well owners and users for the analytes listed.

The Iowa DNR recommends that all private well owners have their water tested at least annually.

Analytes

- [Bacteria/coliform](#) (annually)
- [E.coli/fecal coliform](#) (annually)
- [Nitrate](#) (annually)
- [Arsenic](#) (every 3 years)
- [Manganese](#) (every 3 years)
- [PFAS](#) (requires pre-approval from the DNR)

To get your private well tested, please contact your local county health department.

[County Health Department - contact list](#)

Main Takeaways

Cancer is an important health issue facing your county.

There are proven ways to prevent cancer & find it early.
You can avoid risk factors and get screened.

Iowa has a strong Cancer Plan, resources, & organizations to help fight cancer.

Policy changes at the local and state levels can have a huge impact!
Please communicate your concerns & needs with your state representatives and local policymakers.

This is only the first step.

Thank you for attending!

If you would like to **share your thoughts** on this meeting, please participate in our brief survey. The QR code will direct you to the survey.

This brief survey should take no more than 5-10 minutes of your time.
